Indiana Crop Weather

July 6, 2021

Saturating Rain Slowed Harvests

Consistent rains across the State spurred crop growth and interrupted wheat harvests, according to Nathaniel Warenski, State Statistician, USDA NASS, Indiana Field Office. Soil moisture levels increased slightly from the previous week, with 90 percent of topsoil moisture reported as adequate or surplus.

The average temperature for the week was 73.8 degrees Fahrenheit, 0.3 degrees above normal for the State. The amount of rainfall varied from 0.15 to 4.28 inches over the week. The statewide average precipitation was 1.63 inches. There were 3.7 days suitable for fieldwork for the week ending July 4.

Rainfall spurred crop growth for many and caused minor flooding for some. Corn silking was slightly behind the five-year average with 73 percent of crop rated in good to excellent condition. Soybean blooming was slightly ahead of the five-year average with 70 percent of crop rated in good to excellent condition. Nearly all winter wheat across the State had reached maturity. Due to wet field conditions, winter wheat harvesting progress continued slightly behind the five-year average. Second cuttings of alfalfa and other hay were taken when possible. Harvesting progress for both alfalfa and other hay remained ahead of the five-year average. Pasture conditions were mostly unchanged from last week with 68 percent of pastures rated in good to excellent condition. Other activities for the week included fair preparations, weed identification, equipment repairs, ditch draining, and field scouting.

Soil Moisture: Week Ending 07/04/21				
Item	Very short	Short	Adequate	Surplus
	(percent)	(percent)	(percent)	(percent)
Topsoil moisture	1	9	71	19
Subsoil moisture	2	8	75	15
